PROFESSIONAL SUMMARY

Ray Perez is a Professional Engineer with 24 years of General Civil Engineering and Project Management experience. Ray is the President and Founder of PRC Engineering. He has worked with a variety of clients including the federal government, state and local municipalities and private developers. He has developed exceptional management skills for all types of development and construction projects. Ray has led numerous projects to completion under budget and on time utilizing his engineering experience, confident decision making, and superior project management skills.

Ray has completed several community, military, special district and commercial assessments involving transportation facilities, building structures, environments (Phase I and Phase II), energy efficiency, utility infrastructure, and redevelopment/re-commissioning projects. He is a BPI-Certified Building Analyst and has conducted many high-level Energy Assessments for large commercial properties. Ray has led many Phase I Environmental Site Assessments and he is an industry leader in Stormwater Erosion and Sediment Control planning and implementation.

Ray's experience has helped to establish working relationships with many different developers, owners, and municipalities. His leadership and project management has resulted in many successful and rewarding projects, and his solid judgment and decision making are attributable to his very broad experience history.
